

Sarah Willis is a doctoral student in physiology at the Institute of Sport Sciences at the University of Lausanne. After obtaining her MSc in the United States, Sarah moved to Östersund, Sweden where she worked as a research assistant at the Swedish Winter Sports Research Center for three years. She is grateful for the opportunities to work with and assist many high-level researchers and professionals in her field. Her passion for the mountains and research interests drove her to Switzerland where she currently is focusing her research on muscle oxygenation and blood flow during exercise in hypoxic conditions.
